

FlexTop 2211 Universal Transmitter

4...20 mA transmitter

RTD, T/C, mV and R inputs

Isolation voltage 3.75 kV_{ac}

Configuration via FlexProgrammer

Accuracy better than 0.1°C (Pt100)

Configurable linearisation,
damping and status indication

Local, remote or fixed compensation
for "cold junction" (CJC)

Transmitter temperature alarm

Description

FlexTop 2211 is a 4...20 mA loop-powered, configurable universal transmitter with galvanic isolation between input and output. The input can be configured for RTD or T/C sensors, resistance, current or voltage signals.

Either 2-, 3- or 4-wire connection can be selected for the resistance input. The built-in temperature sensor or a remote Pt100 sensor can be used to compensate for "cold junction" (CJC) if thermocouples are connected.

FlexTop 2211 is embedded in silicone which makes it resistant to humid environments.

The configuration can be established from the dedicated FlexProgrammer configuring tool connected to a PC.

FlexTop 2211 has a 6 mm center hole for fast sensor replacement and spring loaded mounting screws which ensure a safe fastening even in vibrating environments.

A built-in temperature surveillance system gives alarm if ambient temperature limits are exceeded.
